

# WHAT IS ONLINE SAFETY? NEED TO KNOW GUIDE

Keeping your family safe when they are online at home or out and about is essential and can be a concern. Our quick visual guide highlights the risks online and how to protect yourself when using the internet.

## **Defend your device**

Update your devices online protection software regularly.

## **Protect your data**

Use strong passwords and 2 factor authentication to keep passwords safe.

## **Caution where you click**

Spot links that could be online risks and avoid the nightmare of spyware, trojan horses etc.

## **Guard your digital ID**

Don't expose yourself to risk by sharing information online. Be careful and be cautious.

## **Spot online scams**

Keep your eyes peeled for any emails with offers too good to be true and suspicious links.

## **Share with confidence.**

Use secure password-protected websites to share information and data.

## **Shop safe and smart**

Make sure when you shop online it's from a reputable company and avoid paying bills using public Wi-Fi.

## **Keep children safe online**

Warn children about the risks online and install security software to keep them safe when they are on the internet.
